1. True or False: Python is packaged with its own native `datetime` module which handles date and time SQL queries when working with MySQL data.

1 / 1 point

- ☐ True
- ☒ False

 **Correct**

That's correct! Python's `datetime` module can't be embedded in a MySQL SQL query.

2. Which of the following statements require you to invoke the commit module after they are executed using Python? Select all that apply.

1 / 1 point

- ☐ `CREATE`
- ☒ `UPDATE`

 **Correct**

That's correct! The SQL `UPDATE` query modifies the data from the table and records to commit the permanent change.

- ☐ `SELECT`
- ☒ `DELETE`

 **Correct**

That's correct! The SQL `DELETE` query modifies the data from the table and records to commit the permanent change.

3. Which of the following commands are required to use MySQL Connector/Python API in your Python-based application? Select all that apply.

1 / 1 point

- ☐ `import mysqlconnectionpool as connector`
- ☒ `import mysql.connector as connector`

 **Correct**

That's correct! The `import` command imports the installed library into
